

**NOW AVAILABLE Harman Adapter for PelletVent Pro.**

In order to offer a secure tight fit to the exhaust outlet on any Harman Pellet Stove we recommend the use of the Harman PVP stove adapter. The Harman outlet I.D. measures larger than many of the other stoves on the market. This causes the standard PVP adapter to fit inside the outlet instead of over the outside as needed. This adapter is specifically designed to fit over the outside of the Harman stove exhaust outlet.

This will assure that smoke is conducted through the air tight inner stainless steel pipe and does not get in between the inner and outer walls of the PelletVent Pro pipe. As always we recommend that the adapter be sealed to the outlet with high temperature silicone sealant to insure a tight connection.
